

TokTickIT Lab 2 — Final Engineering Deliverable & Quality Assurance Report

Project: TokTickIT — Spec-Driven IT Support Ticket Management System (Lab 2) **Author / Team:** chanya06
Reviewer: Peer Reviewer (Imaybelgracel) **Target Branch:** feature/14-qa-release -> lab2-staging -> main **Date:** September 6, 2026

Answer Part 1: Git Use with Engineering Workflow

1.1 Git Branching Strategy & Staging Workflow

TokTickIT Lab 2 followed a disciplined Git feature-branch workflow. Every sprint issue was developed on an isolated `feature/*` branch and merged into `lab2-staging` via peer-reviewed Pull Requests. Final release integration moves cleanly from `lab2-staging` into `main`.

1.2 Pull Request & Kanban Board Audit Log

- **Sprint Project Board:** TokTickIT Individual Sprints (Kanban statuses: `Backlog`, `Specified`, `Started`, `PR Review`, `Fixing`, `Done`). - **Peer Review Record:** All feature PRs (#23, #25, #27, #29, #30, #31, #32, #33, #34, #35) were reviewed, audited, and approved by peer reviewer `Imaybelgracel`. Complete review comments and resolution logs are documented in [`docs/lab-02/reviewer.md`]
(file:///c:/Users/chany/Documents/GitHub/toktickit/docs/lab-02/reviewer.md).

1.3 Repository Setup & Exclusions

- **Repository README:** Contains full setup instructions, seed commands, database configuration, and test execution guides. - **Git Ignore (`.gitignore`):** Properly ignores `node_modules/`, `dist/`, `.env`, temporary file uploads in `uploads/`, and build artifacts.

1.4 Directory Structure (Section 12 Compliance)

```

Answer Part 2: Spec DD

2.1 Engineering Specification Link

The complete engineering specification is documented under [`docs/lab-02/specification.md`]
(file:///c:/Users/chany/Documents/GitHub/toktickit/docs/lab-02/specification.md).

2.2 Specification Structure & Business Rules

- **Functional Requirements (FR-01..FR-15)**: Detailed specifications for ticket creation, listing, detail retrieval, initial file uploads, soft removals, search/filter, and ownership boundaries. - **Mandatory Business Rules (BR-01..BR-16)**: - **BR-01**: Backend auto-generates unique `TKT-YYYY-XXXXXX` sequence. - **BR-02**: New ticket initial status is `NEW`. - **BR-03**: Development Requester selector is for testing context switching only. - **BR-07**: Summary (5-120 chars) and Description (10-2000 chars) length constraints. - **BR-10**: Attachment limits: allowed `.jpg`, `.jpeg`, `.png`, `.webp`, `.pdf`, max size `<= 5 MB` per file. - **BR-11**: Maximum active attachments limit: 5 files per ticket. - **BR-12**: Soft removal retains metadata, sets `isRemoved: true`, and blocks future binary downloads (`403 Forbidden`). - **BR-13**: Soft removal requires a non-empty removal reason (min 3 chars). - **BR-**

15 : Initial attachments creation and DB persistence are wrapped in `Prisma.$transaction` with automatic disk compensation (`cleanupFiles`) on validation or DB errors.

2.3 Acceptance Criteria (`AC-01..AC-10`) & Definition of Done

100% of Acceptance Criteria (`AC-01..AC-10`) are mapped directly to automated test cases across 5 test levels in [`docs/lab-02/tests.md`](file:///c:/Users/chany/Documents/GitHub/toktickit/docs/lab-02/tests.md).

Answer Part 3: Test DD and Traceability

3.1 Test Plan Document Link

The test plan and traceability matrix are documented under [`docs/lab-02/tests.md`](file:///c:/Users/chany/Documents/GitHub/toktickit/docs/lab-02/tests.md).

3.2 Acceptance-Criterion Traceability Matrix

tbody>

Acceptance Criterion	Description	Validating Test Files	Result
AC-01	Create Ticket with Ticket Number & Ticket Date	<code>create-ticket.api.test.ts</code> , <code>CreateTicket.test.tsx</code> , <code>requester-ticket-flow.spec.ts</code>	Pass
AC-02	Requester Selector required when unselected	<code>RequesterSelect.test.tsx</code> , <code>requester-ticket-flow.spec.ts</code>	Pass
AC-03	My Tickets owned tickets filtering	<code>my-tickets.api.test.ts</code> , <code>MyTickets.test.tsx</code> , <code>requester-ticket-flow.spec.ts</code>	Pass
AC-04	Cross-Requester Ticket Access Blocked (403 Forbidden)	<code>ticket-detail.api.test.ts</code> , <code>attachments.api.test.ts</code> , <code>requester-ticket-flow.spec.ts</code>	Pass
AC-05	Soft removal with reason & blocked download	<code>attachments.api.test.ts</code> , <code>AttachmentSection.test.tsx</code> , <code>requester-ticket-flow.spec.ts</code>	Pass
AC-06	Max 5 active attachments limit	<code>create-ticket.api.test.ts</code> , <code>attachments.api.test.ts</code>	Pass
AC-07	File size & type restriction validation	<code>create-ticket.api.test.ts</code> , <code>CreateTicket.test.tsx</code> , <code>AttachmentSection.test.tsx</code>	Pass
AC-08	Search term in My Tickets	<code>my-tickets.api.test.ts</code> , <code>MyTickets.test.tsx</code> , <code>requester-ticket-flow.spec.ts</code>	Pass

Acceptance Criterion	Description	Validating Test Files	Result
AC-09	Ticket Date displayed on screens	<code>create-ticket.api.test.ts</code> , <code>CreateTicket.test.tsx</code> , <code>RequesterTicketDetail.test.tsx</code>	Pass
AC-10	Form values preserved on submission failure	<code>CreateTicket.test.tsx</code>	Pass

3.3 Execution Results Summary

- **Server Unit & API Tests:** 54 / 54 passed (`npm run test --prefix server`) - **Client Component & Style Tests:** 42 / 42 passed (`npm run test --prefix client`) - **Playwright E2E Tests:** 4 / 4 passed (`npx playwright test`) - **Total Coverage:** 100% Green across all automated test suites.

Answer Part 4: AI Use with Reflection

4.1 LLM Model & Pairing Setup

Engineering work was conducted in pair programming with **Antigravity AI (Gemini 2.5 Pro)**. Full prompt logs are documented in [`docs/lab-02/ai-use.md`](file:///c:/Users/chany/Documents/GitHub/toktickit/docs/lab-02/ai-use.md).

4.2 Key Prompts Summary (Prompts P-01 to P-12)

- **P-01 to P-04:** Architecting specification contracts, API OpenAPI schemas, and Zen Green design tokens. - **P-05 to P-08:** Implementing ticket sequence generator (`TKT-YYYY-XXXXXX`), atomic Prisma transactions, and magic bytes file buffer security validation. - **P-09 to P-12:** Building initial attachments dropzone with HTML5 drag-and-drop, Playwright E2E automation, and disk rollback compensation logic.

4.3 My Reflection

Pairing with an AI agent under Spec DD methodology enforced rigorous upfront planning. The AI excelled at detecting edge-case race conditions in concurrent upload transactions and generating thorough unit/integration tests for magic bytes validation.

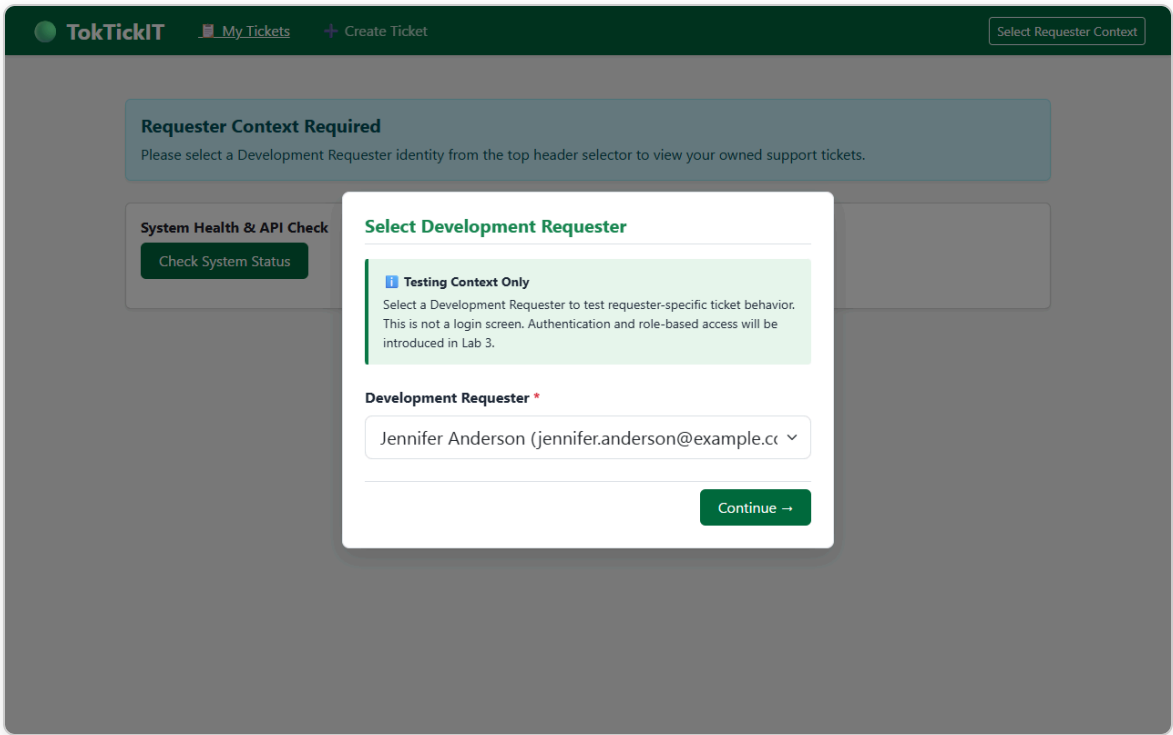

Answer Part 5: Development Requester Select Screen

5.1 Simulated Login Context Selector

Because full authentication is deferred to Lab 3, a **Development Requester Selector** modal (`RequesterSelectorModal.tsx`) simulates user login. The selected requester context is stored in `localStorage` and

passed via `X-Requester-Id` HTTP headers and `requesterId` query parameters.

5.2 Requester Selector Screenshot

Development Requester Selector

Answer Part 6: Working Ticket Screen: Create Mode

6.1 Create Ticket Layout & Workflow

The Create Ticket screen enables users to submit IT support tickets with optional initial file attachments (up to 5 files, <=5MB each, allowed formats: `.jpg` , `.jpeg` , `.png` , `.webp` , `.pdf`).

6.2 Working State Screenshots
